MUNICIPAL COLLECTION

Collect. Segregate. Transport.

Garbage collection bodies for neighbourhoods, campuses and municipal routes.

Representative configuration. Final supply follows the approved specification.

Product range

Compact garbage tippers and hoppers

Separate wet / dry waste compartments

Hopper-cum-tipper bodies and larger collection bodies for route-specific requirements.

Configure around the route

Body volume, loading height, compartment arrangement, tipping method and discharge access.

A 2.2 m³ twin-compartment hopper is one configuration discussed for compact collection vehicles; final payload depends on chassis and waste density.

MATCH THE BODY TO THE VEHICLE

Share chassis model, wheelbase, collection route and waste type. Diesel, CNG or electric chassis compatibility is confirmed before quotation.

MUNICIPAL VEHICLE BODIES

Export requirements & quotation checklist

Configuration brief

Waste type and density; collection route; trips per day; body volume; wet/dry compartment arrangement; loading height; tipping and unloading method.

Vehicle interface

State body-only or complete-vehicle scope. Provide chassis make, model, wheelbase, rated payload and applicable destination requirements. Payload and axle distribution need review for the selected body.

Inspection and supply scope

Agree the drawing revision, material and coating, hydraulic components, functional testing and acceptance records. Confirm who supplies the chassis, mounting and commissioning.

Packing and support

Request the final package dimensions, gross weight, lifting points and shipping arrangement. Confirm warranty, wear items, spares and local service responsibilities in the written offer.

Send with every export enquiry

Company, country, buyer type, product, quantity, destination port/city and required date. Prices, payment, freight terms and delivery are confirmed in the written quotation.
